General Testing Recommendations

Medical providers are recommended to test individuals (1) identified as a close contact to a person with COVID-19 or (2) signs and symptoms compatible with COVID-19 infection, including:

- Fever or chills
- Cough
- Shortness of breath or difficulty breathing
- Fatigue
- Muscle or body aches
- Headache
- New loss of taste or smell
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

SOUTH DAKOTA DEPARTMENT OF HEALTH

Reporting COVID-19 Tests to SD-DOH

- **Reminder:** Coronavirus respiratory syndromes are a Category I disease
- Report **immediately** on suspicion of disease
- Reporting mechanisms:
 - Electronic Laboratory Report (ELR) – HL7 message to SD Health Link (health information exchange)
 - Flat file (CSV) – Secure email
 - Disease reporting website – sd.gov/diseasereport
 - Ensure patient phone numbers are included
 - Fax – 605.773.5509

Not intended for press or for reporting purposes.

Updated Child Care Guidance

CDC recommends universal indoor masking for ages 2 years and older, regardless of vaccination status.

Isolation and quarantine periods can be reduced to five days for people who can consistently wear well-fitting masks, as long as they remain symptom free, or their fever has ended, and symptoms have improved.

For staff and children who cannot wear a mask (including all children under 2 years of age), the safest option is to isolate or quarantine for 10 full days.

Layered COVID-19 prevention strategies are encouraged to protect people not [up to date](#) or not eligible for COVID-19 vaccines.

Providers should implement these strategies to the extent possible in consultation with regulatory agencies and state and local public health departments while also considering the educational needs and social and emotional well-being of the children and the importance of children's access to learning and care.

SOUTH DAKOTA DEPARTMENT OF HEALTH

Updated Travel Guidance

Do NOT travel if...

You are sick, tested positive for COVID-19, are waiting for results of a COVID-19 test, or had close contact with a person with COVID-19 and **are recommended** to quarantine.

Do not travel until a full 10 days after your symptoms started or the date your positive test was taken if you had no symptoms.

Do not travel until a full 5 days after your last close contact with the person with COVID-19. It is best to avoid travel for a full 10 days after your last exposure.

If you must travel during days 6 through 10 after your last exposure or were a close contact and **NOT recommended to quarantine**:

- Test at least 5 days after your last close contact, make sure your test result is negative, and continue to monitor for symptoms. If you don't get tested, avoid travel until a full 10 days after your last close contact with a person with COVID-19.
- Wear a well-fitted mask when you are around others for the entire duration of travel during days 6 through 10. If you are unable to wear a mask, you should not travel during days 6 through 10.

Laboratory Guidance

Not intended for press or for reporting purposes.

SOUTH DAKOTA DEPARTMENT OF HEALTH

1 Million COVID OTC Test Kit Campaign

- On Friday, January 21, SDDOH began distribution of Flowflex COVID-19 antigen home tests.
- By the week of February 7, SDDOH distributed 937,500 Flowflex kits.
- Additional kits are ordered and will be distributed in the coming weeks.
- Unfortunately, supply chains are still strained which has delayed statewide distribution of kits.

The goal of the 1M COVID OTC kit campaign was a one-time distribution of test kits to South Dakota communities. Moving forward, SDDOH will refocus OTC testing resources to preexisting programs that emphasize testing needs of South Dakota's most at-risk populations. All South Dakotans will still have access to other SDDOH testing resources such as free saliva testing from Vault Health.

Not intended for press or for reporting purposes

SDDOH 1 Million Tests: FAQ

Q: What if test kits appear to be damaged?

- A: Slight damage to packaging:** if there is minor cosmetic damage to the kit packaging, please distribute the kit as intended.
- A: Water damage or major damage to packaging (few kits):** do not distribute damaged kits; please discard and do not notify the SDDOH.
- A: Water damage/major damage to packaging (many kits):** do not distribute damaged kits; please discard and notify the SDDOH. SDDOH does not have additional kits for replacement at this time.

Q: When can I request another shipment of Flowflex tests?

- A:** SDDOH will not routinely stock Flowflex kits following the completion of the 1M kit campaign. Following this campaign, SDDOH will refocus COVID test distribution efforts on our long-standing distribution programs in support of at-risk populations. Other federal, state, and local testing opportunities will still be available.

The screenshot shows the South Dakota Department of Health's COVID-19 testing resources page. At the top, the logo for the South Dakota Department of Health is displayed next to the URL doh.sd.gov/covid/. Below this, the text "COVID-19 TESTING" is centered. Three dark blue buttons with white text are arranged horizontally: "COVID-19 Testing LOCATIONS", "FREE At-Home COVID-19 TESTING", and "After Your At-Home COVID-19 TEST". Below these buttons, the "SOUTH DAKOTA COVID-19 INFORMATION LINE" is advertised with the phone number 1-800-997-2880 and the text "Questions about COVID-19? We're here to help." flanked by speech bubble icons. The website URL "COVIDtests.gov" is shown in the top right corner, along with language options: "English", "Español", and "简体中文". The main content area features the heading "Get free at-home COVID-19 tests" followed by a paragraph stating that every home in the U.S. is eligible for 4 free at-home COVID-19 tests, which are completely free and ship in 7-12 days. A blue button labeled "Order Free At-Home Tests" is provided. Below this, a link to "other testing resources" is shown. To the right of the text, there are two images: a woman holding a test kit and a white USPS delivery van.

Spikevax and Moderna COVID-19 Vaccine

On January 31, 2022, the FDA announced the second approval of a COVID-19 vaccine. The vaccine has been known as the Moderna COVID-19 Vaccine, and will now be marketed as Spikevax, for the prevention of COVID-19 in individuals 18 years of age and older. Spikevax has the same formulation as the EUA Moderna COVID-19 Vaccine and is administered as a primary series of two doses, one month apart.

Not intended for press or for reporting purposes.

SOUTH DAKOTA DEPARTMENT OF HEALTH

Pfizer COVID-19 Vaccine for ages 6 months – 4 years

Pfizer-BioNTech has submitted data for FDA review regarding a COVID-19 vaccine for children age 6 months to 4 years.

On February 1st, the U.S. Food and Drug Administration announced a meeting of its Vaccines and Related Biological Products Advisory Committee (VRBPAC) on February 15th to discuss the request for emergency use authorization (EUA) of the Pfizer-BioNTech COVID-19 Vaccine for use in children 6 months through 4 years of age.

ACIP has scheduled a meeting for February 17th to consider the FDA's findings. The Director of the CDC will then recommend the vaccine for this age group.

Doses may be delivered/administered as soon as President's day.

Not intended for press or for reporting purposes.

Vaccination status

- Updated the description of healthcare personnel, patients, and visitors as “up to date.” Read more here: [Stay Up to Date with Your Vaccines | CDC](#)

Get Vaccinated and Stay Up to Date

Up to date means a person has received all recommended COVID-19 vaccines, including any booster dose(s) when eligible.

Fully vaccinated means a person has received their primary series of COVID-19 vaccines.

This call is not intended for the press or for reporting purposes

SOUTH DAKOTA DEPARTMENT OF HEALTH

Use of N-95 respirators

**Please see complete guidance for full personal protective equipment recommendations*

- CDC continues to recommend gown, gloves, eye protection and a NIOSH-approved N95 or equivalent or higher-level respirator **when caring for patients known or suspected to be infected with SARS-CoV-2.**
- For **source control** measures, facilities may choose to implement the following:

Source control options for HCP include:

- A NIOSH-approved N95 or equivalent or higher-level respirator OR
- A respirator approved under standards used in other countries that are similar to NIOSH-approved N95 filtering facepiece respirators (Note: These should not be used instead of a NIOSH-approved respirator when respiratory protection is indicated) OR
- A well-fitting facemask.

When used solely for source control, any of the options listed above could be used for an entire shift unless they become soiled, damaged, or hard to breathe through. If they are used during the care of patient for which a NIOSH-approved respirator or facemask is indicated for personal protective equipment (PPE) (e.g., NIOSH-approved N95 or equivalent or higher-level respirator) during the care of a patient with SARS-CoV-2 infection, facemask during a surgical procedure or during care of a patient on Droplet Precautions, they should be removed and discarded after the patient care encounter and a new one should be donned.

<https://www.cdc.gov/coronavirus/2019-ncov/hcp/infection-control-recommendations.html>

Viral testing

- CDC continues to emphasize that anyone with even mild symptoms of COVID-19, regardless of vaccination status, should receive a viral test as soon as possible.
- Asymptomatic patients with close contact with someone with SARS-CoV-2 infection, regardless of vaccination status, should have a series of two viral tests for SARS-CoV-2 infection.
 - Generally, test immediately (but not earlier than 24 hours after the exposure) and, if negative, again 5–7 days after the exposure.
- ***Testing is not generally necessary for asymptomatic people who have recovered from SARS-CoV-2 infection in the prior 90 days***; however, if tested, an antigen test instead of a nucleic acid amplification test (NAAT) is recommended as some people may remain NAAT positive after they are no longer infectious.

SOUTH DAKOTA DEPARTMENT OF HEALTH

Criteria to end **isolation** for patients with SARS-CoV-2 infection cared for in a healthcare facility

- Asymptomatic patients or those with mild to moderate illness and who are not moderately to severely immunocompromised: **manage with recommended precautions for 10 days after their symptoms first appeared.**
- Patients with severe to critical illness and who are not moderately to severely immunocompromised: **manage with recommended precautions until at least 10 days and up to 20 days have passed since symptoms first appeared.**
- Symptomatic and asymptomatic patients who are moderately to severely immunocompromised: **a test-based strategy and (if available) consultation with an infectious disease specialist or other expert is recommended to determine when these patients can be released from isolation.**

SOUTH DAKOTA DEPARTMENT OF HEALTH

Quarantine for patients:

- Empiric use of Transmission-Based Precautions (quarantine) is recommended for patients who have had close contact with someone with SARS-CoV-2 infection if they are **not up to date** with all recommended COVID-19 vaccine doses. *Duration of quarantine is described in the guidance under Manage Residents with Close Contacts:*
https://www.cdc.gov/coronavirus/2019-ncov/hcp/long-term-care.html#anchor_1631031193599
- Quarantine is **not** generally needed following close contact with someone with SARS-CoV-2 infection for asymptomatic patients **who are up to date on all recommended COVID-19 vaccine doses or who have recovered from infection in the prior 90 days**. Potential exceptions are described in the guidance.

Visitation

- Even if they have met [community criteria](#) to discontinue isolation or quarantine, visitors **should not visit** if they have any of the following and have not met the same criteria used to discontinue isolation and quarantine for patients (typically until 10 days after last exposure or onset of symptoms has passed):
 - 1) a positive viral test for SARS-CoV-2,
 - 2) [symptoms of COVID-19](#), or
 - 3) close contact with someone with SARS-CoV-2 infection

Infection Prevention & Control Assessment Tool (ICARs) for LTC and ALF

Infection Control Assessment and Response (ICAR) tools are used to systematically assess a healthcare facility's infection prevention and control (IPC) practices and guide quality improvement activities (e.g., by addressing identified gaps).

How does a COVID ICAR benefit my ALF or LTC facility?

***Non-regulatory & FREE:** Talk one-on-one with an infection preventionist and an infectious disease doctor to see how your facility is REALLY doing during the pandemic.

***Not just a checklist:** While the CDC ICAR guides the discussion, the team talks through scenarios that are relevant to YOUR facility. They can compare what worked last year vs. what works now and review the latest guidelines, science and updates.

***Above and Beyond:** Sharing tips and tricks on what works for other facilities in South Dakota and what might also work for you. Topics like vaccination uptake in staff, addressing PPE Fatigue, and reinforcing what you are doing RIGHT.

***Feedback** after the ICAR to have on file for your facility. Something you can refer to when needed in the future!

Putting Infection Prevention into Everyday Practice

February 22, 2022 | 2:00 – 3:00 p.m. CT

To stop the spread of infections, everyone working in a healthcare facility needs to have a foundational knowledge of infection prevention and must be ready to implement basic measures throughout their workday and at home. In this session, we will discuss how infections spread and identify ways to break this chain. We will discuss the differences in standard and transmission-based precautions and what each of those consist of. And then finally, we will discuss methods for controlling infections while providing care.

Together, we have the power to help stop infections from spreading.

Presenter: Cheri Fast, RN, BSN, CIC

Doses & Persons Administered Vaccine by County of Residence

PCR Test Positivity Rate: This rate is equal to the number of positive PCR tests divided by total PCR tests, within the specified period of time. Date range includes last full day (24 hours) captured in the data set.

Confirmed Cases and 14-Day Trend Line by Date Reported to SD-DOH

14-Day Trend of Confirmed Cases by Date Reported to SD-DOH: This graph shows the trend (increasing or decreasing) of COVID-19 confirmed cases (persons who meet the national surveillance case definition case for COVID-19) at the state or county level.

Rate of Cases: Number of cases (persons who meet the national surveillance case definition for a confirmed or probable case of COVID-19) reported to SD-DOH in the last 7 days as a daily average (or cumulative) divided by the state or county population multiplied by 100,000. This is done to compare disease burden across geographic areas (eg. state or county).

PPE Request Procedure

All requests for PPE from DOH must be:

- Emailed to COVIDResourceRequests@state.sd.us,
- Faxed to **605.773.5942**, or
- Called in to **605.773.3048** to ensure prioritization and coordination of requests.
- Do not duplicate your request by using all three means of communication.
- Any requests received through any other email or number will all be directed to email COVIDResourceRequests@state.sd.us OR call **605.773.3048** and requesting entities must provide information regarding their current facility status.
